IV. KUNCI JAWABAN KUISIONER

| NO | JAWABAN | SUMBER |
|--------------------------------|---------|--|
| Pengertian Antibiotik | | |
| 1) | Tidak | Antibiotik merupakan obat untuk mencegah dan mengobati infeksi yang disebabkan oleh bakteri (Parse, et al., 2017). Antibiotik tidak diberikan pada penyakit non-infeksi dan penyakit infeksi yang dapat sembuh sendiri (self-limited) seperti infeksi virus (Kemenkes, 2015) |
| Penggolongan Antibiotik | | |
| 2) | Ya | Golongan ini terdiri dari berbagai golongan obat yang mempunyai struktur cincin β -Laktam, yaitu penisilin contoh obat pada golongan ini yaitu, penisilin G dan penisilin V, amoksisilin, ampisilin dan piperasilin. |
| 3) | Tidak | Golongan ini terdiri dari berbagai golongan obat yang mempunyai struktur cincin β -Laktam, yaitu penisilin contoh obat pada golongan ini yaitu, penisilin G dan penisilin V, amoksisilin, ampisilin dan piperasilin. |
| Resistensi Antibiotik | | |
| 4) | Tidak | Pada dasarnya resistensi terjadi pada satu jenis antibiotik terhadap bakteri tertentu, jika bakteri tersebut sudah resisten terhadap satu jenis antibiotik maka diperlukan antibiotik lain sebagai terapinya, biasanya dokter akan meresepkan jenis atau golongan yang lebih tinggi tentunya dengan harga yang lebih mahal dan kadangkala pemakaiannya lebih toksik (Utami, 2011). |
| 5) | Ya | Antibiotik yang digunakan pada penyakit infeksi bakteri adakalanya tidak bekerja lagi terhadap bakteri-bakteri tertentu yang ternyata memiliki daya tahan kuat dan menunjukkan resistensi terhadap obat tersebut (Tjay, 2008). Resistensi terjadi |

| | | |
|-------------------------|----|---|
| | | ketika bakteri berubah dalam satu atau lain hal yang menyebabkan turun atau hilangnya efektivitas obat yang digunakan untuk mencegah infeksi. Sehingga jika sudah terjadi resistensi maka antibiotik tidak mampu lagi bekerja membasmi bakteri. |
| 6) | Ya | Resistensi adalah kemampuan bakteri untuk menetralkan dan melemahkan daya kerja antibiotik (Menkes, 2011) |
| Dosis Antibiotik | | |
| 7) | Ya | Dewasa : 250 mg tiap 8 jam, dosis digandakan pada infeksi berat; ANAK hingga 10 tahun: 125 - 250 mg tiap 8 jam, dosis digandakan pada infeksi berat. |
| 8) | Ya | Berat badan lebih dari 40 kg: 0,5-1 g dua kali sehari. Infeksi jaringan lunak, kulit, dan saluran kemih tanpa komplikasi: 1 g/hari. ANAK kurang dari 1 tahun: 25 mg/kg bb/hari dalam dosis terbagi. ANAK 1-6 tahun: 250 mg dua kali sehari. ANAK lebih dari 6 tahun: 500 mg dua kali sehari. |
| 9) | Ya | DEWASA dan ANAK di atas 8 tahun, 250-500 mg tiap 6 jam atau 0,5-1 g tiap 12 jam pada infeksi berat dapat dinaikkan sampai 4 g/hari. ANAK sampai 2 tahun, 125 mg tiap 6 jam; 2-8 tahun 250 mg tiap 6 jam. |
| 10) | Ya | oral: 250 mg tiap 6 jam. Pada infeksi berat dapat ditingkatkan sampai 500 mg tiap 6-8 jam. |
| 11) | Ya | Oral: <i>Infeksi serius.</i> Dewasa, 150-300 mg tiap 6 jam. <i>Infeksi lebih serius.</i> 300-450 mg tiap 6 jam. Anak, 8-16 mg/kg BB/hari dibagi dalam 3-4 dosis. Sebaiknya diminum dengan segelas air. |

Cara Penggunaan Antibiotik

| | | |
|-----|-------|--|
| 12) | Tidak | Penggunaan antibiotik harus tepat dari segi cara atau durasi penggunaan. Meminum antibiotik tanpa durasi waktu yang tidak tepat, pemakaian yang berlebih atau kurang maupun tidak sesuai indikasi dapat menjadi pencetus terjadinya resistensi (Kemenkes, 2011) karena bisa saja sakit yang dialami bukan penyakit yang disebabkan oleh infeksi bakteri. Jika menggunakan antibiotik hanya ketika merasa sakit, dapat juga berpengaruh terhadap ketidaktepatan interval pemberian. Ketepatan interval pemberian ini sangat penting untuk mempertahankan kadar obat darah sehingga dapat mencapai efek terapi (Juwita, 2017). |
| 13) | Tidak | Antibiotik tertentu seperti golongan tetrasiklin dan kuinolon seperti siprofloksasin, bila dicampur bersama susu akan menyebabkan menurunnya khasiat obat karena absorpsinya terganggu (Kemenkes, 2011). Meminum antibiotik sebaiknya diminum dengan air putih, karena air putih bersifat netral sehingga absorpsi obat tidak akan terganggu. |
| 14) | Tidak | Jika penggunaan suatu antibiotik sudah rasional misal tepat dosis, tepat waktu, tepat cara pemberian maka resiko terjadinya bahaya akan berkurang. |
| 15) | Tidak | Kurang dari 12 tahun, Merusak tulang rawan (cartilage disgenesis) (Menkes,2011) |
| 16) | Tidak | Penggunaan antibiotik pada wanita hamil dan menyusui Hindari penggunaan antibiotik pada trimester pertama kehamilan kecuali dengan indikasi kuat. |

| | | |
|-----|-------|---|
| 17) | Ya | Sesuai anjuran dokter dan termasuk kategori B Studi pada hewan coba tidak menunjukkan adanya gangguan pada fetus dalam trimester pertama, tetapi tidak ada studi pada ibu hamil. Amfoterisin B Aztreonam Azitromisin Eritromisin Fosfomisin Karbapenem Klindamisin Metronidazol Penisilin Sefalosporin (Menkes,2011). |
| 18) | Tidak | Kategori B Studi pada hewan coba tidak menunjukkan adanya gangguan pada fetus dalam trimester pertama, tetapi tidak ada studi pada ibu hamil. Amfoterisin B Aztreonam Azitromisin Eritromisin Fosfomisin Karbapenem Klindamisin Metronidazol Penisilin Sefalosporin (Menkes,2011). |
